#### **DIMENSIONAL VARIABLES**

# i=layer index

N=number of layers

Interior Model(i).R0= R(i)

Interior Model(i).rho0= $\rho_0(i)$ 

Interior\_Model(i).mu0= $\mu_0(i)$ 

Interior Model(i).eta0=  $\eta_0(i)$ 

Interior Model(i).Ks0=  $\kappa_0(i)$ 

Interior Model(i).ocean=0/1(no/ocean)

#### **TIDAL FORCING**

#### Forcing.n= $n_T$

Forcing.m= $m_T$ 

Forcing.F= $\phi_{n-}^{(T)m_T,+}$ 

# Forcing.T= $\frac{2\pi}{}$

$$\Phi^T = \Phi^{(T)}_{n}^{m_T,+} Y_{n_T}^{m_T} e^{i\omega t} -$$

### **NON-DIMENSIONAL VARIABLES**

## 1D Profile

Interior Model(i).R=R(i)/R(N)Interior Model(i).rho= $\rho_0(i)/\rho_0(N)$ Interior\_Model(i).mu= $\mu_0(i)/\mu_0(N)$ Interior\_Model(i).Ks= $\kappa_0(i)/\mu_0(N)$ Interior\_Model(i).eta=  $\eta_0(i)/\mu_0(N)T$ Interior\_Model(i).MaxTime= $\omega \eta_0(i)/\mu_0(N)$ 

Interior\_Model.Gg= $G\rho^2(N)R^2(N)/\mu_0(N)$ 

$$\hat{\mu}(i) = \frac{\mu(i)}{1 - i \frac{\mu(i)}{\omega \eta(i)}}$$

Interior Model(i).muC=  $\hat{\mu}_0(i)/\mu_0(N)$ 

#### 3D Variations

$$(\mu, \kappa, \eta)(i) = (\mu_0, \kappa_0, \eta_0)(i) + \sum_{n \neq 0, m} (\mu_0 \mu_n^m, \kappa_0 \kappa_n^m, \eta_0 \eta_n^m)(i) Y_n^m$$

Computed in get rheology

Minimum required inputs

## **Option 1: complex spherical harmonics**

Interior Model(i).mu variable(:,1)=n Interior Model(i).mu variable(:,2)=m Interior Model(i).mu variable(:,3)=  $\mu_n^m$ 

Interior\_Model(i).eta\_variable(:,1)=n
